ABOUT THE AUTHORS

BRENDAN O'REGAN (1945-1992)

As Vice-President for Research for the Institute of Noetic Sciences, Brendan O'Regan's work involved him for nearly 20 years in the evaluation and funding of interdisciplinary research into the study of brain/mind function, extraordinary human capacities, and health and healing. Beginning in the 1980s, his study focused on the mechanisms of healing and the phenomenon of spontaneous remission. He directed the creation of the world's largest database on remission and studied and supported research in the area of psychoneuro-immunology, the role of psychosocial and behavioral factors in health and medicine, as well as remission.

Mr. O'Regan is the originator of *The Heart of Healing*, a six-hour international documentary television series. The television series is a cooperative project of The Institute of Noetic Sciences, Independent Communications Associates (InCA) and The Turner Broadcasting System. The series will explore the human quest for healing from a scientific and cross-cultural perspective, combining the ancient and the modern, the scientific and the traditional into a exploration of human beliefs and ways of healing. *The Heart of Healing* will be broadcast on TBS in October of 1993.

He was educated in his native Ireland and received a graduate degree at Indiana University. He served as Research Coordinator for R. Buckminster Fuller, a consultant to BBC Television, a lecturer at the School of Architecture in London, and Science Policy Consultant at Stanford Research Institute. He has been a Fetzer Fellow, advising the Fetzer Institute in the area of Mind-Body Health, and was a member of the Office of Technology Assessment Panel which investigated alternative cancer therapies.

His writings are included in both periodicals and books; he wrote regularly for *The Noetic Sciences Review* and has contributed to several books, including *Changing Images of Man*, *The Mind as Healer—The New Heresy*, and *Issues & Trends in Health*. He has been honored with two major awards. In 1989 he received the Enelow Award from the American Institute of Humanistic Psychology for his work in understanding healing processes. In 1991 he received the first Rafael Award for his outstanding contributions to research, clinical practice and public education in the field of Mind-Body health and spontaneous remission.

CARYLE HIRSHBERG

Caryle Hirshberg is a Senior Research Associate with the Institute of Noetic Sciences. She is the Project Manager of The Remission Project which has collected the largest electronic database of medically reported cases of spontaneous remission of cancer and other diseases in the world, over 3500 articles from over 860 medical journals in over 20 different languages.

She is the Vice President of Beneficial Plant Research Institute and The Center for Integrative Medicine, a non-profit research and education foundation founded by Dr. Andrew Weil in 1979 to investigate and promote the use of natural products in medicine, to study the use of natural medicinals and traditional healing practices by indigenous people worldwide, to encourage pharmacological research into the efficacy of plant substances and to promote the intelligent integration of scientific, traditional and alternative approaches to healing and medicine.

She is Senior Researcher for *The Heart of Healing*, a six-hour international television documentary series which investigates the role of mind, body, spirit, and beliefs in healing. The television series will be broadcast on The Turner Broadcasting System in October of 1993.

She did her undergraduate study in chemistry, mathematics and psychology at the University of Florida. Her graduate work was in neurochemistry at Indiana University. An educator, lecturer and researcher with a background in chemistry, biochemistry, and botany, she has taught chemistry, botany and horticulture, has done research in remission, neurochemistry, pharmacology, cancer biochemistry and cardiology, and has lectured on the subject of spontaneous remission.
